

Low Grade Dysplastic Nodule
in Right Hepatic Lobe
LTCDS# D711

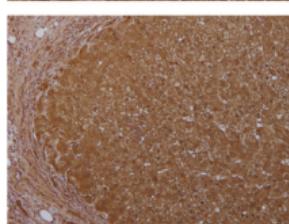

HCC Grade I
in Left Hepatic Lobe
LTCDS# D711

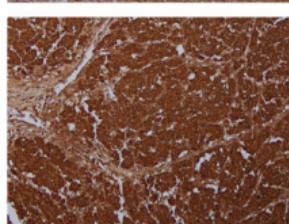

Low Grade HCC arising in Dysplastic
Nodule of Right Hepatic Lobe
LTCDS# D697

HCC; Moderately Differentiated
Grade II
LTCDS# D704

HCC Grade I
LTCDS# D718

HCC; Poorly Differentiated
Grade III
LTCDS# D704

Supplementary Fig. 1.

AEG-1 expression is increased with the grades of HCC: AEG-1 expression was analyzed by immunohistochemistry from 5 different individuals containing different grades of HCC. The first patient (LTCDS# D711) contained low grade dysplastic nodule in the right hepatic lobe and grade 1 HCC in the left hepatic lobe with no vascular invasion. The second patient (LTCDS# D697) contained low grade HCC arising in dysplastic nodule of right hepatic lobe. The third patients (LTCDS# D704) contained four nodules of moderately differentiated HCC (grade II) arising in the background of liver cirrhosis. The fourth patient (LTCDS# D718) contained multiple nodules ranging from Grade I to Grade II HCC with no vascular invasion and no metastatic carcinoma with clinical history of Hepatitis C virus infection. The fifth patient (LTCDS# D728) contained multifocal moderately to poorly differentiated HCC (Grade II-III) with focal areas of vascular invasion.
